

Easily Integrate Your Google or Exchange Calendar

Effortless Real Time Availability

Easily integrate Coconut with both Microsoft Exchange and Google Calendars to ensure that staff availability is always accurate.

Use Coconut to book appointments, walk-ins and call-ins, reschedule appointments, as well as update appointment statuses such as complete, confirmed, or no-show. Coconut will make sure that all of the changes are reflected in your Exchange or Google calendar.

1:00pm - 2:15pm

Improve accuracy by integrating your calendar system with Coconut

Use your Exchange or Google Calendar to book internal meetings, breaks, vacations or out of office periods (make sure you set them as 'busy' for Coconut to catch them). We'll use this availability information to block off busy times, ensuring that you don't get booked for a meeting during your dental appointment.

Your staff can view their calendars in either Coconut or Exchange/Google Calendar, knowing that it's 100% up to date, with no chance of double bookings.

Still worried about syncing? We've made it easy for your administrators to implement and review the synchronization between the two systems.

That's effortless real-time availability.

See how we can make your scheduling easier.
